

Application No. 09/539,210
Response to Final Office Action

Customer No. 01933

R E M A R K S

Reconsideration of this application, as amended, is respectfully requested.

Claim 1 has been amended to clarify the feature of the present invention whereby the charge accumulating periods for the rows are set to have a period equal to one of: (i) a sum of a read pulse interval for each row and a pulse width of the pre-charge pulse, and (ii) a sum of an integer multiple of a read pulse interval and the pulse width of the pre-charge pulse.

It is respectfully submitted that the amendment to claim 1 is fully supported by the disclosure in the specification at page 24, line 8 to page 25, line 5. In particular, the amendment to claim 1 is supported by formula (6) at page 25, line 5, whereby the charge accumulating period T_a is equal to the sum of: (a) read pulse interval T_{delay} times an integer k and (b) pre-charge period T_{prch} .

No new matter has been added, and no new issues with respect to patentability have been raised. Accordingly, it is respectfully requested that the amendment to claim 1 be approved and entered under 37 CFR 1.116.

It is respectfully submitted, moreover, that claim 1, and claims 2-5 and 7-13 depending therefrom, now fully comply with the requirements of 35 USC 112, and it is respectfully requested that the rejection thereunder be withdrawn.
